SEALING KITS

Overview

Fortran offers two different sealing kits to suit your specific requirements. The sealing kits have been installed on thousands of polycarbonate traffic signals across North America.

The plastic sealing kits are strong and durable, made out of tough impact resistant, 1/8" extruded UV stabilized polycarbonate or aluminum. The plastic sealing kits are 2" wide and the rubber gaskets included help seal the top or bottom of the signal from moisture, debris or birds. The sealing kits are held together with a stainless steel 8-32 machine screw available in yellow, grey and black.

The metal sealing kits are made out of durable aluminum alloy and are available in standard yellow or a natural finish. The metal sealing kits include a 3" rubber gasket and locking nut to watertight installation. Available with optional aircraft cable for reinforcing single point mounted signals

Features

- Easy to Install
- Lightweight
- Strong and Durable
- Maintenance Free

FORTRAN

Specifications

- Material: UV Stabilize, Flame Retardant Polycarbonate or aluminum
- Colour: Standard: Traffic Yellow, Black, and Green. Other Colours available by request
- Dimensions: Metal Kit: Length 1.5", Length c/w hole 1.75"
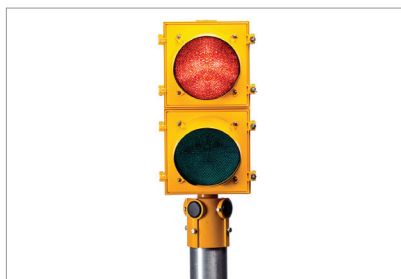

Ordering Information

Part #	Description
